

Technology that understands style

Kempinski Hotel Adriatic in Savudrija, Croatia, is breaking new grounds and offering its clients real luxury in control of room and suite resources. It is among first hotels in the world implemented smart control technology also outside ballroom and conference area. The system is implemented with world leading control and automatization technology by Crestron Electronics, Inc. which allows guests to control lighting, curtains, cooling, heating and and other resources by simply touching single icon on Crestron controller touch screens.

Presidential suite guests will be able to use both in-wall and portable advanced controllers to set the lighting scenes in the entire suites according to the occasion, whether relaxing by the fireplace or enjoying evening party by the private pool. Temperature, curtains, indoor and outdoor lights and music adjust as intended.

DARSONIK, Crestron's International partner company from Croatia, in addition to fully programming and implementing Presidential Suite control systems, has also supplied full presentation and control systems in the multi-functional ballroom and meeting rooms simplifying usage of multimedia and presentation technology for presentations on large screens, video conferencing and audio which automatically splits depending on divider walls usage. When closed, two parts of the ballroom become totally independent as far as control of LCD projectors, screens, lighting, audio and presenters PCs is concerned.

The highest reliability and availability of the control systems is achieved by implementing DARSONIK-developed Hot Stand-by feature.

The hotel also offers useful information access via sophisticated Digital Signage system so guests can view different multimedia content on displays throughout the hotel 24 hours a day.
